

Since August 2021, Saiver's Hygienic Air Handling Units (AHUs) boast Eurovent HAHU certification.

Saiver Srl is one of the few manufacturers of air handling units to have obtained Eurovent product certification for both performance and hygiene with the highest rating of three stars.

Eurovent Hygiene Certification (**HAHU**) combines the requirements of various hygiene standards (e.g., VDI6022-1, DIN1946-4, HTM) into a single program.

The program offers three levels, where higher levels indicate greater hygiene.

- **Level 1** is recommended for schools, offices, and hotels.
- **Level 2** is recommended for hospitals (except infectious wards and intensive care units).
- **Level 3** is recommended for the food, pharmaceutical, clean rooms, and operating theaters. For Level 3, air recirculation is not permitted.

Certified Characteristics:

Regarding **services**, the following are certified:

1. Production;
2. Maintenance;
3. Quality management system;
4. User and maintenance manual;
5. Shipment;

Regarding **hygiene**, the following are certified:

1. Materials;
2. Frame performance;
3. Arrangement and performance of components (filters, coils, recovery systems, fans, humidifiers, dehumidifiers, and silencers).
